

system so that the window transport is inoperative when the ignition is switched off.

Standard No. 208 Occupant Crash Protection: (a) installation of a U.S.-model seat belt in the driver's position, or a belt webbing-actuated microswitch inside the driver's seat belt retractor; (b) installation of an ignition switch-actuated seat belt warning lamp and buzzer; (c) replacement of the driver's and passenger's side air bags and knee bolsters with U.S.-model components if the vehicle is not so equipped. The petitioner states that the vehicles are equipped with combination lap and shoulder restraints that adjust by means of an automatic retractor and release by means of a single push button at both front designated seating positions, with combination lap and shoulder restraints that release by means of a single push button at both rear outboard designated seating positions, and with a lap belt in the rear center designated seating position.

Standard No. 214 Side Impact Protection: installation of reinforcing beams. NHTSA understands that Daimler Benz did not certify the 1994 Mercedes-Benz E320 as meeting the dynamic performance requirements of this standard, but that it did certify 1995 through 1998 models as meeting those requirements.

Standard No. 301 Fuel System Integrity: installation of a rollover valve in the fuel tank vent line between the fuel tank and the evaporative emissions collection canister.

The petitioner also states that a vehicle identification number plate must be affixed to the vehicles to meet the requirements of 49 CFR Part 565.

Interested persons are invited to submit comments on the petition described above. Comments should refer to the docket number and be submitted to: Docket Management, Room PL-401, 400 Seventh St., SW, Washington, DC 20590. It is requested but not required that 10 copies be submitted.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above address both before and after that date. To the extent possible, comments filed after the closing date will also be considered. Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

Authority: 49 U.S.C. 30141(a)(1)(A) and (b)(1); 49 CFR 593.8; delegations of authority at 49 CFR 1.50 and 501.8.

Issued on: March 25, 1998.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA-98-3572]

Uniroyal Goodrich Tire Manufacturing; Grant of Application for Decision of Inconsequential Noncompliance

Uniroyal Goodrich Tire Manufacturing (Uniroyal) of Greenville, South Carolina, which is an operating unit of Michelin North America, Inc., has determined that some of its tires fail to comply with the labeling requirements of 49 CFR 571.109, Federal Motor Vehicle Safety Standard (FMVSS) No. 109, "New Pneumatic Tires," and has filed an appropriate report pursuant to 49 CFR Part 573, "Defect and Noncompliance Reports." Uniroyal has also applied to be exempted from the notification and remedy requirements of 49 U.S.C. Chapter 301—"Motor Vehicle Safety" on the basis that the noncompliance is inconsequential to motor vehicle safety.

Notice of receipt of the application was published, with a 30-day comment period, on November 4, 1997, in the **Federal Register** (62 FR 59755). NHTSA received no comments on this application during the 30-day comment period.

In FMVSS No. 109, paragraph S4.3.5 requires that "if the maximum inflation pressure of a tire is 420 kPa (60 psi), the tire shall have permanently molded into or onto both sidewalls, in letters and numerals not less than 1/2 inch high, the words 'Inflate to 60 psi or Inflate to 420 kPa (60 psi)'".

From the 30th through the 37th week of 1997, the Uniroyal plant located in Woodburn, Indiana, produced approximately 4,800 temporary spare tires (T115/70D14 Uniroyal Hideaway tires) with a minor omission of the markings required by 49 CFR 571.109 S4.3.5 on one side of the tire. Instead of "INFLATE TO 60 PSI" these tires were marked "NFLATE TO 60 PSI." A total of 2,750 of the 4,800 tires were

delivered to Original Equipment Manufacturers (OEM) customers, the remaining 2,050 have been isolated in Uniroyal's warehouses and will be brought into full compliance with the marking requirements of FMVSS No. 109 or scrapped.

Uniroyal supports its application for inconsequential noncompliance with the following four statements:

1. All performance requirements of FMVSS No. 109 are met or exceeded.
2. The correct marking appears on one side of the tire.
3. It is reasonable to expect that the consumer will interpret "NFLATE TO 60 PSI" as "INFLATE TO 60 PSI," especially when it is used in reference to a pressure of 60 PSI.

4. The vehicle placard, as required by 49 CFR 571.110 S4.3, [specifies] the proper inflation pressure to use.

The primary safety purpose of requiring "INFLATE TO 60 PSI" on this motor vehicle tire is to ensure that the end-user selects the appropriate inflation pressure. The absence of this labeling would likely result in an improper tire inflation pressure selection by the tire dealer or vehicle owner. In this case, Uniroyal stated the correct inflation pressure of 60 PSI; however, on one side of the tire, the letter "I" was omitted from the word "INFLATE." The agency agrees with Uniroyal's rationale that it is reasonable to expect that the consumer will interpret "NFLATE TO 60 PSI" as "INFLATE TO 60 PSI," especially when it is used in reference to a pressure of 60 PSI.

In consideration of the foregoing, NHTSA has decided that the applicant has met its burden of persuasion that the noncompliance it describes is inconsequential to safety. Accordingly, its application is granted, and the applicant is exempted from providing the notification of the noncompliance that is required by 49 U.S.C. 30118, and from remedying the noncompliance, as required by 49 U.S.C. 30120. (49 U.S.C. 30118; 49 U.S.C. 30120; delegations of authority at 49 CFR 1.50 and 501.8).

Issued on: March 26, 1998.

L. Robert Shelton,

Associate Administrator for Safety Performance Standards.
